

Owner: _____ Patient: _____

PLEASE READ AND FILL OUT THIS FORM COMPLETELY

The first step in promoting oral health is to have your pet's hardened tartar removed. Since this requires the use of special instruments and equipment it is not possible to remove tartar yourself.

The procedure consists of:

- Administration of a short acting general anesthetic
- Thorough oral examination
- Removal of tartar accumulation using an ultrasonic scaler
- Extraction of hopelessly diseased teeth

Pre-Operative Blood Screen: I understand that anesthesia carries some risk (*even though small*). Therefore, blood testing is recommended before general anesthesia. The anesthetic agent is removed from the body by the liver and kidneys, so it is important to know before anesthesia that these organs are functioning properly. Lab work helps us make this determination and results will serve as future references.

Pre-operative lab work (\$95.00)

I decline _____ Pre-Anesthesia Lab Work at this time.

I understand if diseased teeth are found they will be extracted

I decline _____ I would like to be contacted before any extractions.

Pain Medication: All dental patients receive pre-operative pain medication to keep them comfortable the day of surgery. We highly recommend purchasing a post-operative pain package. This is optional and is priced at (\$46.50 – \$58.50) depending on the weight of the patient.

I decline _____ the post-operative pain package at this time.

To prevent rapid accumulation of tartar and dental disease at home dental care is needed.

I accept: Dental Chews Dental Diet Toothbrush

PARASITE POLICY: All animals entering the clinic with internal or external parasites will be treated at owner's expense. All new patients are required to have an intestinal parasite screen.

VACCINATION POLICY: All canine patients must have proof of Rabies and Bordetella vaccinations and all feline patents must have proof of Rabies and FRCP or the animal will be vaccinated at owner's expense.

Optional Vaccinations: Canine: Rattlesnake Flu DHPP/DHLPP
Feline: Leukemia

Optional Treatments: Nail Trim (complimentary) Anal Glands (complimentary)

Microchip (\$45.50) Ear plucking (\$13.50) Heartworm Test (\$40.50)
